CORN PLANTER BOX ADD-ONS

Customize your planter box mix with targeted add-ons that enhance early vigor, nutrient uptake, and root strength.

TS201

A **bioinsecticide seed treatment** that activates a plant's natural defense system through Pink-Pigmented Facultative Methylotrophs (PPFMs). Helps crops resist pest pressure by priming defenses, improving root regeneration, and promoting healthier growth.

→ Strengthens plants to outgrow stress and defend against key insect pests.

VeraNoX

An **EPA-registered biological insecticide seed treatment** that helps protect seed and seedlings from seedcorn maggot and other secondary insect pests in planter-box and treated-seed applications.

→ Helps protect stand establishment and reduce replant risk with convenient on-farm seed treatment.

ChitoNox

A **fungal chitosan-based seed treatment** that protects against soil-borne diseases and nematodes while stimulating root and plant growth. Its pharma-grade formulation provides consistent performance and enhances nutrient uptake for stronger, healthier seedlings.

→ Defends roots, promotes vigor, and supports early-season success.

FIRST DEFENSE

A **broad-spectrum biological fungicide** containing plant growth–promoting rhizobacteria (PGPR) that trigger a crop's natural immune response. It protects roots from Rhizoctonia, Pythium, and Fusarium while promoting vigorous growth and nutrient uptake.

→ Activates plant defenses, improves root health, and supports higher yields.
