

UPZYME

Water Soluble Fertilizer with Enzymes

UpZyme combines two enzymes specifically identified to increase phosphate availability, increase nutrient and water availability, boosting plant growth, while maximizing microbial activity.

This product is designed for dissolving in water and applying through fertilizing equipment into actively growing root zones, or injected near the seed during planting. It has a low salt index, so it is ideal for use as a starter or side dress fertilizer applied directly to the soil.

Mannanase and Phosphatase designed to kick start the uptake of available soil nutrients and water, while maximizing microbial activity.

Key Benefits

- Supports germination and early vigor.
- Aids in microbial activity.
- Boosts root growth.
- Increases nutrient availability and uptake.
- Phosphatase enzymes release phosphate from organic phosphate sources in the soil, which increases nutrient availability and uptake.
- Mannanase enzymes break down starches that surround the outermost layer of the root tip. A chemical reaction increases the flow of water and nutrients to the root zone. This in turn boosts root growth and increases microbial activity.

Directions for Use

Replacement for 10-34-0 starter fertilizer: For every 1 gallon of 10-34-0 fertilizers, replace with .5 lbs of UpZyme dissolved into 1 gallon of water. A maximum of 2 lbs UpZyme can be dissolved per gallon. However, longer mix times and agitation are required.

Use Rate:

Starter or side-dress fertilizer. Row crop: Recommended rate is 2.5lbs. of UpZyme dissolved into 5 gallons of water per acre. *May be run through irrigation systems.*

Packaging:

Sold in a 50 lb bag, 40 bags per pallet or a 2,000 lb super sack.

UpZyme

GENERAL INFORMATION

The phosphatase enzyme contained in UpZyme with Enzyme Technology releases phosphate from organic phosphate sources in the soil. The mannanase enzyme releases sugars from polysaccharide chains.

This product is designed for dissolving in water and applied through fertilizing equipment, injected into irrigation systems into actively growing root zones, or injected near the seed during planting. It has a low salt index, so it is ideal for use as a starter or sidedress fertilizer applied directly to the soil.

UpZyme is recommended for use on, but not limited to, vegetable and row crops, deciduous fruit and nut trees, citrus, avocados, vine and berry crops, pasture and range grasses and most other crops.

RATE RECOMMENDATIONS

Starter or side-dress fertilizer: Use a minimum of 2.5 lb/acre at planting, dissolved in adequate water.

For best use, mix 0.5 lb concentrate/gal of water. DO NOT exceed 2 lb UpZyme per gallon of water. Repeat as needed.

Direct replacement for 10-34-0 starter fertilizer: For every 1 gallon of 10-34-0 fertilizers, replace with 0.5 lbs of UpZyme dissolved into 1 gallon of water.

DIRECTIONS FOR USE

Compatibility: UpZyme may be applied separately or in conjunction with most other fertilizers. When mixing UpZyme with other fertilizers or products, completely dissolve the recommended amount of UpZyme into the appropriate amount of water prior to mixing with other products. A compatibility test is recommended if the desired combination has not been previously used.

DO NOT use this product with ammonium thiosulfate, potassium thiosulfate or other high pH or high free-ammonia products.

Mixing: Dissolve the recommended amount of UpZyme into approximately one half the required water. Slowly add the remaining water while maintaining constant agitation. Water quality and temperature will determine maximum solubility. Warmer water temperatures increase solubility and shorten dissolving time. As this product goes into solution, the water temperature will drop. Therefore it is important when preparing concentrated solutions to allow for this temperature drop to insure that the fertilizer is completely dissolved.

PRECAUTIONARY STATEMENTS

Based on currently available data, this product is not classified as a hazardous substance. However, observe good industrial hygiene practices. Wash hands after handling.

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal. Keep out of reach of children. Store away from incompatible materials. Store away from heat, direct sunlight and incompatible materials. Best stored in an enclosed building capable of maintaining temperature below 110°F. Follow first in, first out inventory management practices. Dispose of contents/container in accordance with local regulations.
