

TRIVITA

PGR Bio-stimulant liquid

Trivita is a fortified cytokinin designed to increase pollination and support photosynthesis during fruit or grain fill. The unique combination produces more flowering/fruiting sites, and more importantly increases the plant's net capture of solar energy to help drive sugar production.

Increases Flowering/Fruiting Sites

- Kinetin drives cell differentiation
- More branches, more flowers
- More reproductive sites

Enhances Plant Photosynthesis

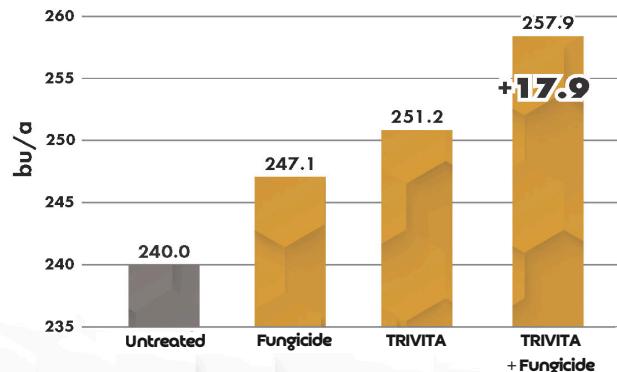

- Choline Chloride (CC) and GABA capture and transfer sun energy
- Build protein and membranes

Produces Larger Yields

- Stronger pollination
- Less abortion
- Higher test weights

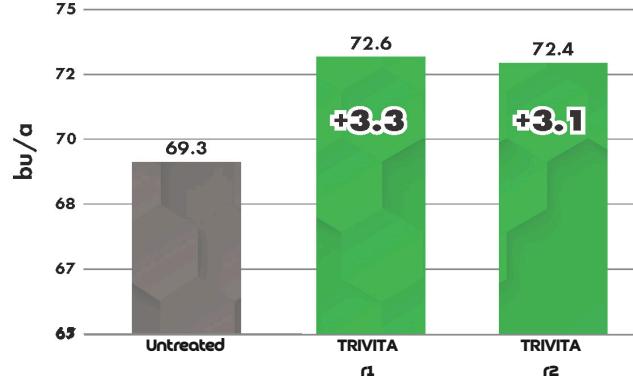

TRIVITA ON CORN

Replicated trials @ vt application
2 year summary

TRIVITA ON SOYBEANS

Replicated trials with r1 & r2 applications
3 year summary
